

RADON DETEK canisters meet EPA requirements and are device listed by the EPA. These diffusion barrier canister are designed for a 2-5 day test period. Simply return the canister to TCS in a mailer provided. It is analyzed with computer based equipment on the same day it is received, and a confidential report is e-mailed that day or mailed on the next business day. There are NO additional lab fees.(additional postage may apply)

Long term detectors (alpha tracks) are designed to span a period of 91days to 1 year. It is to be used if a short term test has already been done, and the result was below 10 pCi/l.

Radon water tests should be done if there is a well, and a short or long term test has shown an elevated radon level of 4.0 pCi/l or more.

Analysis results for long term detectors and radon water kits are available in about 2 weeks.
